

State Farm Arena

Basketball Arena

Project: State Farm Arena
Architect: HOK
Partners: Oldcastle

Location: Atlanta, GA
Contractor: Turner | Hunt JV
Completion: October 2018

Scope: Home to the NBA's Atlanta Hawks and host to 170+ events and more than 2 million guests each year, State Farm Arena (formerly Philips Arena) represents a new era in fan-facing design. Following a \$200 million renovation – the second largest in NBA history – downtown Atlanta's largest arena denotes a major shift in the way spectators take in basketball games, concerts and other events. Beyond novel additions such as a Killer Mike's SWAG Shop and a social club created by musician Zac Brown, 20 years of disjointed nonexperiential viewing have been replaced by a half-dozen different seating options designed to accommodate various price points – from the NBA's first courtside club to party suites with sliding doors for a more communal experience. To ensure safety and enhance the viewing experience for fans, Sightline Commercial Solutions custom engineered architectural railing systems, using Track Rail, Tensiline Cable Railing and Griprail, that are featured throughout the arena.

Viewing optimizing Tensiline Cable Railing with aluminum anodized framing guides fans in safety and style to and from their seats.

A combination of Tensiline Cable Railing, Griprail and Classic Picket Railing can be found throughout the arena.

Fans in the upper seating bowl enjoy clear views of the action below, thanks to the surrounding Track Rail.

Griprail provides sturdy support along aisles throughout the arena.

We elevate places where experiences happen by providing innovative engineering, fabrication, and installation solutions to the most complex challenges. Discover our unconventional approach.
