

Lift Gates

Automated Seating Riser

Maximize the utility of field and arena access tunnels with an engineered, dual-purpose seating solution. Sightline designs and manufactures custom automated lifting seating risers that convert underutilized tunnel space into premium, revenue-generating seating during events. Each system is precision-built to integrate with venue infrastructure and features a fully automated lifting mechanism, enabling rapid vertical retraction at the push of a button. This allows for seamless transition between seating deployment and unobstructed access for equipment transport, broadcast operations, and emergency vehicle ingress/egress—without compromising safety, efficiency, or spectator experience.
