

Project: U.S. Coast Guard HQ
Architect: Perkins+Will
Completion: May 2012

Location: Washington, D.C.
Contractor: Clark Construction

Scope:

Sightline Commercial Solutions delivered a suite of custom exterior railing systems for a modern commercial facility, combining architectural appeal with lasting durability. The project featured stainless steel cable railing with custom frames and round handrails surrounding the building's perimeter, offering clean sightlines and weather-resistant performance. A custom 6-inch-tall ankle rail was designed specifically for the boardwalk areas—providing subtle edge protection without obstructing views—while round stainless steel handrails were installed throughout the exterior using both wall-mounted and post-mounted configurations for visual consistency and functional flexibility. On the rooftop patio, Sightline installed a custom post-supported glass railing system, delivering clear views and a refined finish that enhances the space's open-air design. This project showcases Sightline's ability to engineer tailored solutions that meet both the structural and aesthetic demands of complex commercial environments, while reinforcing the company's reputation for quality, customization, and attention to detail.
