PROJECT OVERVIEW

Sightline provided more than 780 linear feet of architectural glass railing throughout Granite Park VII, a 330,000-square-foot, 13-story office building in Plano, Texas. The railing was installed throughout the lobby, stairs, landings and overlooks, helping maintain the building's open, minimalist aesthetic while supporting safety throughout high-traffic areas.

The system combines clear tempered laminated glass, aluminum base shoes, mechanically fastened connections, polished glass edges and thru-glass handrail standoffs. Transparent glass panels help preserve unobstructed views across the expansive mixed-use atrium while reinforcing the building's refined architectural detailing.

DESIGNED. ENGINEERED. BUILT.
