LED-Integrated Railing

PROJECT OVERVIEW

Sightline furnished more than 8,000 linear feet of architectural guardrail and handrail systems throughout Morton Amphitheater, spanning premium guest areas, public concourses, seating sections and elevated viewing spaces. The all-aluminum, black powder-coated railing package included picket guardrails, custom perforated panel systems and drink rails supporting quartz surfaces provided by others.

More than 1,700 linear feet of LED-integrated railing was incorporated throughout the venue. Sightline designed and provided the LED strip within handrail and grip rail systems in the seating bowl and coordinated with the electrical trade to develop custom perforated railing designed to integrate their LED lighting. Together, the varied systems create a cohesive architectural railing package supporting safety, circulation and the amphitheater's modern guest experience.
