PROJECT OVERVIEW

As part of the Memorial Stadium north end zone transformation, Sightline **engineered, coordinated and fabricated** more than 7,500 linear feet of architectural railing and specialty systems throughout premium seating areas, hospitality spaces, concourses, stairs and accessible routes.

The scope included stainless steel and powder-coated Track Rail glass guardrail, custom perforated panels, drink rails, suite dividers, aisle and courtesy railing, cable railing, exterior glass windscreen and entrance canopies. Extensive coordination was required around heated seating, suite refrigerators, quartz countertops and other architectural interfaces to help bring the renovation's premium spaces together.

DESIGNED. ENGINEERED. BUILT.
